github.com/Cybernextin | Chennai, India

SUMMARY

CEH v12 certified cybersecurity professional with hands-on expertise in SOC alert triage, SIEM operations, and web application penetration testing. Designed a TryHackMe CTF machine (Shakthimaan) challenged by 700+ global researchers — ranked Top 7% worldwide on TryHackMe. Skilled in MITRE ATT&CK-based threat analysis, OWASP Top 10 exploitation, and structured pentest reporting with CVSS scoring. Strong communicator with proven ability to document and present security findings clearly to both technical and non-technical stakeholders. Actively seeking SOC Analyst L1 or VAPT roles in Chennai.

SKILLS

Blue Team / SOC: Splunk, Log Analysis, Alert Triage, Incident Response, Threat Hunting, SIEM
Penetration Testing: Burp Suite, Metasploit, Nmap, Nessus, OWASP ZAP, Nikto, Hydra, Wireshark, Aircrack-ng
Web Exploitation: SQL Injection, XSS, CSRF, SSRF, Broken Authentication, File Inclusion, Privilege Escalation
Frameworks: OWASP Top 10, MITRE ATT&CK, Cyber Kill Chain, CVSS Scoring,
Networking: TCP/IP, DNS, HTTP/HTTPS, Network Enumeration, IDS/IPS
Programming: Python, Bash, Java, C, C++
Operating Systems: Kali Linux, Ubuntu, Windows
Soft Skills: Technical Report Writing, Cross-team Communication, Analytical Thinking, Attention to Detail

EXPERIENCE

Cybersecurity Intern

Feb 2026 – Apr 2026

Unified Mentor

Remote

- Identified 15+ OWASP Top 10 vulnerabilities — SQLi, XSS, CSRF, Broken Authentication — using Burp Suite, Nmap, and Nessus across simulated enterprise web applications.
- Delivered structured penetration testing reports with CVSS scores, proof-of-concept evidence, and prioritised remediation steps, replicating real-world pentest deliverables.
- Collaborated with team members to validate findings and cross-reference vulnerability classifications against MITRE ATT&CK techniques.

EDUCATION

B.Tech — Artificial Intelligence & Machine Learning

Aug 2022 – April 2026

Panimalar Engineering College, Chennai, Tamil Nadu

CERTIFICATIONS

CEH v12 EC-Council, 2024	Top 7% Global TryHackMe Platform	Ethical Hacking Udemy	CTF Award Competition 2024

PROJECTS

CTF Machine — Shakthimaan

TryHackMe | Nmap • Metasploit • Burp Suite • Linux tryhackme.com/jr/shakthimaan

- Designed and deployed a custom vulnerable Linux machine on TryHackMe; 30+ global security researchers have attempted it, validating the real-world relevance of embedded scenarios.
- Embedded a multi-stage attack chain — SQLi → file inclusion → SUID abuse and sudo misconfiguration-based privilege escalation — directly mirroring MITRE ATT&CK TTPs.

FTMS Sentinel — File Transfer Management System

Python | RBAC • Cryptographic Hashing • Audit Logging github.com/Cybernextin/FTMS-Sentinal

- Built a security-first file transfer system with SHA-256 integrity verification, role-based access control (RBAC), and real-time anomaly alerting aligned with SOC monitoring workflows.
- Implemented least-privilege design and full audit logging pipeline — open-source on GitHub, demonstrating secure SDLC practices applicable to blue team environments.

Web Application Penetration Testing Lab

Burp Suite • OWASP ZAP • Nessus • DVWA • Juice Shop [PortSwigger Academy](https://portswiggeracademy.com)

- Conducted end-to-end assessments across all OWASP Top 10 categories on DVWA and OWASP Juice Shop — SQLi, XSS, CSRF, SSRF, Broken Auth, and Security Misconfigurations.
- Produced a professional pentest report with CVSS-scored findings, proof-of-concept screenshots, and actionable remediation guidance — demonstrating client-ready reporting skills.

Outfit Analyzer — AI Style Recommendation App

Python | Computer Vision API • REST API cybernextin.github.io/Outfit-Analyzer

- Developed a full-stack web app with secure API key handling, input validation, and rate limiting; deployed to GitHub Pages showcasing secure API integration best practices.

KEY ACHIEVEMENTS

20+ CTF Participants TryHackMe Shakthimaan	Top 7% Global Ranking TryHackMe Platform	CEH v12 Certified EC-Council, 2024
---	---	---

- Designed the Shakthimaan CTF machine with real-world attack vectors — challenged by 20+ security professionals globally, recognised for realistic vulnerability scenarios.
- Ranked Top 7% globally on TryHackMe (3M+ users) — sustained performance across offensive and defensive security challenges.
- CEH v12 certified by EC-Council (2024) — validated expertise in ethical hacking, penetration testing methodologies, and security assessment frameworks.
- I conducted a hands-on workshop at Zybeak Institute, where participants engaged in a Capture The Flag (CTF) challenge designed to strengthen their practical skills.
