## SUMMARY

CEH v12 certified cybersecurity professional specialising in web application penetration testing, SOC alert triage, and CTF machine design. Top 7% on TryHackMe globally — CTF machines challenged by 700+ security researchers. Seeking a role in Cybersecurity Analysis, SOC Operations, or Penetration Testing.

## SKILLS

**Penetration Testing:** Burp Suite, Metasploit, Nmap, Nessus, OWASP ZAP, Nikto, Hydra, Wireshark, Aircrack-ng  
**Web Exploitation:** SQL Injection, XSS, CSRF, SSRF, Broken Authentication, File Inclusion, Privilege Escalation  
**Blue Team / SOC:** Splunk, Log Analysis, Alert Triage, Incident Response, Threat Hunting, IOC Analysis  
**Frameworks:** OWASP Top 10, MITRE ATT&CK, Cyber Kill Chain, CVSS Scoring  
**Networking:** TCP/IP, DNS, HTTP/HTTPS, Network Enumeration, Firewall Config, IDS/IPS  
**Programming:** Python, Bash, Java, C, C++  
**OS:** Kali Linux, Ubuntu, Windows

## EXPERIENCE

**Cybersecurity Intern**  
**SkillVertex**

Online  
Sep 2023 – Oct 2023

- Identified OWASP Top 10 vulnerabilities (SQLi, XSS, CSRF, Broken Authentication) using Burp Suite, Nmap, and Nessus in a hands-on lab environment.
- Wrote structured vulnerability reports with CVSS scores and remediation steps — deliverables matching real-world pentest standards.

## EDUCATION

**B.Tech — Artificial Intelligence & Machine Learning**  
**Panimalar Engineering College**

Chennai, Tamil Nadu  
Aug 2022 – May 2026

## CERTIFICATIONS

## PROJECTS

### CTF Machine — Shakthimaan (TryHackMe)

[tryhackme.com/jr/shakthimaan](https://tryhackme.com/jr/shakthimaan)

Nmap • Metasploit • Burp Suite • Linux

- Designed a custom vulnerable Linux machine on TryHackMe; 700+ security researchers have attempted it globally.
- Embedded real-world vulnerabilities — SQLi, file inclusion, weak credentials — with privilege escalation via SUID abuse and sudo misconfigurations.

### FTMS Sentinel — File Transfer Management System

[github.com/Cybernextin/FTMS-Sentinal](https://github.com/Cybernextin/FTMS-Sentinal)

Python • RBAC • Cryptographic Hashing • Audit Logging

- Built a security-first file transfer system with cryptographic integrity verification, role-based access control (RBAC), and real-time anomaly alerting.
- Logging pipeline aligned with SOC monitoring workflows; open-source on GitHub demonstrating least-privilege design and full SDLC practices.

### Web Application Penetration Testing Lab

[PortSwigger Academy](https://portswiggeracademy.com)

Burp Suite • OWASP ZAP • Nessus • DVWA • Juice Shop

- Tested DVWA and OWASP Juice Shop across all OWASP Top 10 categories — SQLi, XSS, CSRF, SSRF, Broken Auth, and Security Misconfigurations.
- Delivered structured pentest report with CVSS scores, proof-of-concept screenshots, and remediation guidance.

### Outfit Analyzer — AI Style Recommendation App

[cybernextrin.github.io/Outfit-Analyzer](https://cybernextrin.github.io/Outfit-Analyzer)

Python • Computer Vision API • REST API

- Full-stack web app using computer vision APIs to analyse outfit images; implemented secure API key handling, input validation, and rate limiting.
- Deployed to GitHub Pages demonstrating secure API integration and end-to-end full-stack development.

## KEY ACHIEVEMENTS

### 700+
